

We produce the following drainage clips.

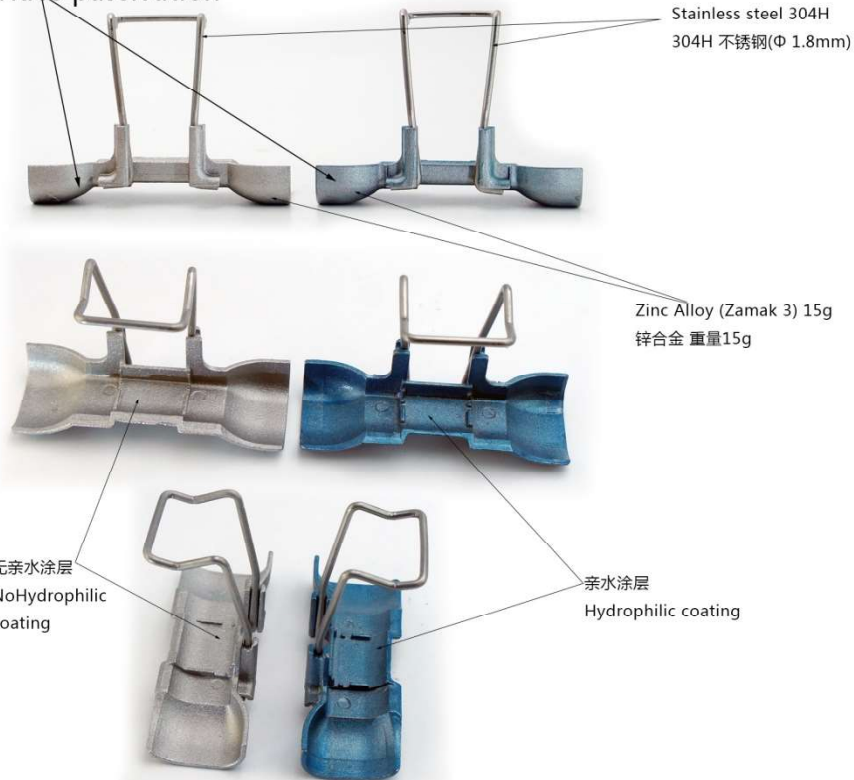

1, made by Metal:

Is composed of a zinc alloy cap and 304 stainless steel feet, the product has a service life of 20 years, It doesn't clog and doesn't come off when washing with a brush.

It has two specifications, one has a hydrophilic coating on the surface, and the other does not. After the surface has a hydrophilic coating, it has a better drainage effect, and has a better performance in light rain or condensation.

surface passivation

Metal drainage clips

2, made by Plastics, with service life of 7~8 years,
Plastics drainage clips also has two specifications, one is the surface with a hydrophilic coating ,
and the other does not.

Plastic drainage clips

3, is the drainage clips for BIPV. It is made of zinc alloy.

When the two PV panels modules are installed back-to-back without gaps, use the BIPV clips, which itself comes with adhesive inside, which is glued directly to the surface of the modules aluminum frame.

Because the zinc alloy drainage clips has a service life of more than 20 years, will not clog, Its feet are made of spring steel (304 stainless steel), which can maintain elasticity for a long time. will not fall off (the size of its feet can be customized according to the size of the panels modules). We recommend you to buy a zinc alloy drain clamp with a hydrophilic coating for use.
